

JAN K. FARIS GARCÍA

AI Engineer / Software Engineer · Ships AI Products End-to-End

San Juan, PR (US Citizen, EST) | (939) 343-2647 | jankarlo.faris@outlook.com | linkedin.com/in/ian-faris-garcia | janfaris.com | github.com/janfaris

SUMMARY

Full-stack AI engineer (ex-Microsoft) operating across the entire product lifecycle — design, build, deploy, operate. At Microsoft, built an autonomous LLM agent that took over daily PR review across 7+ repositories and co-designed a 21-session AI learning program a Partner-level leader pushed org-wide. Outside work, shipped 8 AI products in 18 months as a solo engineer: an App Store app, two open-source npm packages, and revenue-oriented platforms running LLM pipelines in production. Force multiplier: raises the AI capability of every team I join. TypeScript, Python, Postgres/Supabase, Azure, AWS.

PROFESSIONAL EXPERIENCE

Microsoft — Software Engineer II, Trust Platform (Commerce Core)

Jul 2025 – Jul 2026

Remote — fraud & abuse prevention systems for Microsoft's commerce ecosystem

- **Built PRPilot, an autonomous AI-powered PR-review agent** using Copilot CLI, Microsoft Scout, custom skills, and MCP servers (Azure DevOps, WorkIQ): continuously monitored 7+ repositories, auto-reviewed and graded ~5 vendor/team PRs daily, and escalated only the ones needing human review — removing a full daily review burden from engineers.
- **Maintained transaction-risk APIs and apps** that scored the riskiness of transactions across multiple Microsoft products and countries, keeping them compliant with Microsoft's Secure Future Initiative (SFI).
- **Shipped production full-stack features from prototype to launch** across TypeScript, React, Python, and Azure (AKS), and led end-to-end delivery with a vendor team across multiple workstreams — coordinating engineering, product, and business stakeholders.
- **Co-designed and delivered a 21-session org-wide AI learning program** (Copilot CLI, MCP, agentic workflows) — self-initiated, then requested org-wide by a Partner-level leader. Separately onboarded ~15 PMs to AI tooling with setup sessions and ongoing support; non-engineers left able to build working AI tools.
- **Led security & compliance remediation** across repositories — vulnerability management, attestations, secure-by-design and governance initiatives, accessibility compliance — plus observability (OpenTelemetry/Geneva) on Azure Kubernetes Service.
- **Known for rapid prototyping** — internal and external-facing apps that distilled complicated processes into a few clicks, repeatedly used by PMs and leadership to green-light features.

Xtillion — Associate Engineer

Jan 2024 – Jul 2025

- **Led a 12-month reporting-platform replacement end-to-end** for a major healthcare client — research, system design, implementation, and stakeholder management. Fully retired legacy SQL Server + SSRS in favor of Retool (front end), Snowflake (backend, warehousing, and functions), dbt for data transformation, and GitHub Actions CI/CD — a platform generating 5,000+ reports per day across PDF and multiple file formats.
- **Solo-built HIPAA-compliant automated report delivery** on top of the new platform, over encrypted email (AWS SES) and fax (OpenText Fax API) — meeting healthcare clients on the channels they actually use.
- **Built conversational analytics on Databricks Genie** for a separate client: business users chat with their data in plain English, skipping months of upfront data-engineering cleanup before getting answers.
- **Cut cloud costs** by refactoring a C# application's database endpoints, eliminating an entire SQL Server instance.

Pratt & Whitney — Software Engineer

Aug 2021 – Aug 2023

- **Cut build time 90%** by automating and securing CI/CD on the F-135 (Joint Strike Fighter) military DevSecOps transformation.
- **Migrated a legacy military database** to a secure modern stack (Perl, Python, SQL) and built a C code-generation wrapper and a GUI for F-135 blade-assembly validation.

Earlier: Support Engineer at BrainHi (SaaS, 2023); Founder of UPRConnect, an AI-powered student platform at UPRM (led a team of engineers and designers).

AI PRODUCT PORTFOLIO — SOLO, END-TO-END (JANFARIS.COM)

8 products shipped in 18 months, designed, built, deployed, and operated alone. Live demos and writeups at janfaris.com.

[Lupa](#) · AI client-acquisition engine (2026)

Next.js 16 · React 19 · Gemini · Supabase · Stripe

From a Google Maps search, audits local businesses with PageSpeed, generates a personalized Spanish demo website per lead with Gemini, and delivers the pitch over WhatsApp with view tracking. 120+ demo sites generated across 7 business categories; in active use for real client acquisition.

- [demotape](#) · Open source · npm (2026)

TypeScript · Playwright · FFmpeg · Zod

CLI that records production-quality demo videos of web apps from a JSON config — auth-aware, skeleton-free, multi-format. Replaces a category of \$30/mo SaaS tools. MIT-licensed.
- [spanish-tone-spec](#) · Open source · npm (2026)

TypeScript · Zod

Prompt-side Spanish locale tone control for LLM output — corpus-driven, no post-hoc regex. Solves regional-dialect drift in LLM-generated Spanish (e.g., Mexican vs. Puerto Rican tone). MIT-licensed.
- [Vantage](#) · AI real-estate platform (2025)

Next.js · Claude · ElevenLabs · Stripe

Voice-first property search for Puerto Rico: buyers describe what they want in natural language and get listings that actually match. Includes agent tooling, listing management, and Stripe subscriptions.
- [Blok](#) · AI PropTech over WhatsApp (2025)

Next.js · WhatsApp API · Twilio · Claude

AI condo management for Puerto Rico delivered entirely over WhatsApp — residents and admins interact with an LLM agent through the channel they already use.
- [Janga + Wandr](#) · Consumer apps (2025)

React Native · Supabase · Gemini

Janga: social discovery app, live on the App Store (Expo/React Native/Supabase). Wandr: AI travel planner with itineraries, flights, and local events (React/Supabase/Gemini/SerpAPI).

SKILLS

AI Engineering: LLM products in production (Claude, GPT, Gemini, Copilot), autonomous agents, Model Context Protocol (MCP) servers & skills, multimodal pipelines (vision QA, image gen, voice/ElevenLabs), prompt engineering, evals

Languages: TypeScript/JavaScript, Python, SQL, C#, C

Full-Stack: React, Next.js, Node.js, React Native/Expo, Tailwind, REST APIs, Stripe, Twilio/WhatsApp API

Cloud & Data: Azure (AKS), AWS (Lambda, S3, SES), PostgreSQL, Supabase, Snowflake, Databricks (Genie), SQL Server, dbt, GitHub Actions CI/CD, OpenTelemetry, Playwright

Leadership: AI enablement & training (21-session program; engineers, PMs, execs), vendor-team delivery, stakeholder management, technical writing (janfaris.com essays)

WHAT MANAGERS SAY (LINKEDIN, VERIFIABLE)

"I've made a lot of hiring decisions over my career, and bringing Jan onto my team was one of the best... a true force multiplier. I'd hire Jan again tomorrow." — Ryan McDonald, Principal, Microsoft (direct manager)

"A true 10x engineer... the type of person you can trust with ambiguous, high-impact problems and know he'll deliver a solution that exceeds expectations." — Javier Román, Data & AI Leader (direct manager, Xtillion)

EDUCATION & CERTIFICATIONS

University of Puerto Rico, Mayagüez — B.S. Software Engineering

Dec 2023

GitHub Copilot Certified (GH-300) — Microsoft, Jun 2026 | **Bilingual:** English & Spanish (native)
